QUARTERLY ON-CHAIN HOLDER REPORT · EDITION 1

RBNT holders in Q3 2026

How RBNT holders behaved between 1 July and 30 September 2026: accumulation, selling, staking and how concentrated holdings are.

Period
1 Jul 2026 00:00 UTC to 30 Sep 2026 23:59 UTC

Snapshot blocks
`3025809` → `3209414`

Data source

Data collected
26 Oct 2026

SUMMARY

The quarter at a glance

Over the quarter, RBNT moved from Redbelly's reserved wallets and vesting contracts into unnamed wallets, and more of it went into staking. Unnamed wallets gained 139.1 million RBNT in total, and RBNT staked in the two Reddex pools rose by 18.2% to 751.3 million. Holdings stayed highly concentrated: the 10 largest unnamed holders held 49.3% of all RBNT in unnamed wallets on 30 September.

STAKED IN REDDEX POOLS

751.3M

+115.5M (18.2%) over the quarter

HELD BY UNNAMED WALLETS

1,922.1M

+139.1M over the quarter

SHARE HELD BY THE TOP 10 UNNAMED HOLDERS

49.3%

+0.9 pts since 1 July

UNNAMED HOLDERS ABOVE 10 RBNT

14,552

+111 since 1 July

- **Staking grew.** 751.3 million RBNT was staked on 30 September, against 635.8 million on 1 July. The no-lock pool took most of the increase (+82.1 million). 1,255 wallets had a stake at the end of the quarter, against 1,268 at the start, so the growth came from larger stakes rather than more stakers.
- **The largest holders mostly held or added.** Of the 100 largest unnamed wallets on 1 July, 43 grew, 49 stayed about the same and 8 shrank. Together their holdings rose by 45.3 million RBNT (3.3%).
- **Concentration edged up.** The top 10 unnamed holders' share went from 48.4% to 49.3%, and the top 100 from 76.6% to 77.4%.
- **One day of reserved-wallet moves.** On 10 September, 500 million RBNT moved from Ecosystem (Locked) to Ecosystem 2 (Unlocked), 253.1 million from Ecosystem 2 (Unlocked) to Investors, and 33.3 million from Governance (Locked) to Governance (Unlocked). All of these stayed inside the reserved wallets.
- **RBNT left the reserved wallets through one wallet.** Ecosystem (Unlocked), the only reserved wallet that sends its own transactions, sent out 43.8 million RBNT net, including 15 million to fund staking rewards.
- **Vesting contracts released 73.9 million RBNT** over the quarter (counting WRBNT as RBNT), and the RBNT locked in the bridge to other chains rose to 43.2 million.

What this report is and is not. It describes what happened on the chain. It does not predict prices and it is not investment advice. Wallets are named only if they are already public: Redbelly's reserved wallets from the DAO treasury page, the WRBNT contract, the two Reddex staking pools, and contracts with a public name on Routescan. Every other wallet appears only inside a group.

Five words you will see

Wallet	An address on the Redbelly chain that can hold RBNT. One person can have many wallets, and one wallet (an exchange, for example) can hold tokens for many people. So wallet counts are not people counts.
WRBNT	"Wrapped RBNT": RBNT locked in a contract and given back as a token that apps can use. 1 WRBNT is always backed by 1 RBNT. We count each token once.
Staking	Locking RBNT in a Reddex pool to earn RBNT rewards. The no-lock pool lets you withdraw at any time. The 365-day pool locks each deposit for a year.
Snapshot	The chain's state at one exact block. We compare the last block before 1 July with the last block before 1 October.
Holdings	For each wallet: plain RBNT + WRBNT + RBNT it has staked. Staking does not reduce what a wallet holds in this report.

SECTION 1

Where RBNT sits

We read the balance of every address that has ever appeared in a Redbelly transaction: 9,931.9M RBNT at the end of the quarter, out of the 10,000M allocated at launch. Of the difference, 32.1M has been burned as transaction fees since launch, and about 36.0M (0.36%) sits in addresses this method cannot reach (see the method section). Here is how much each group held at the start and end of the quarter.

CHART 1 **Share of all RBNT held by each group**

Reserved wallets held 59.7% of all RBNT on 30 September. Unnamed wallets held 19.4%, up from 17.9%. Staked RBNT is counted with the wallet that staked it.

Source: Redbelly mainnet RPC, balances at blocks 3025809 (30 Jun 2026 23:57 UTC) and 3209414 (30 Sep 2026 23:57 UTC)

GROUP	1 JUL 2026	30 SEP 2026	CHANGE
Redbelly reserved wallets	5,974.8M	5,931.0M	-43.8M
Reddex pools: reward funds (stakes are counted with stakers)	3.3M	3.5M	+0.2M
Bridge (RBNT Native OFT Adapter)	38.3M	43.2M	+4.9M
Token vesting contracts	1,520.0M	1,446.1M	-73.9M
Other smart contracts	614.0M	586.1M	-27.9M
Unnamed wallets	1,783.0M	1,922.1M	+139.1M
Total	**9,933.4M**	**9,931.9M**	

IN PLAIN WORDS

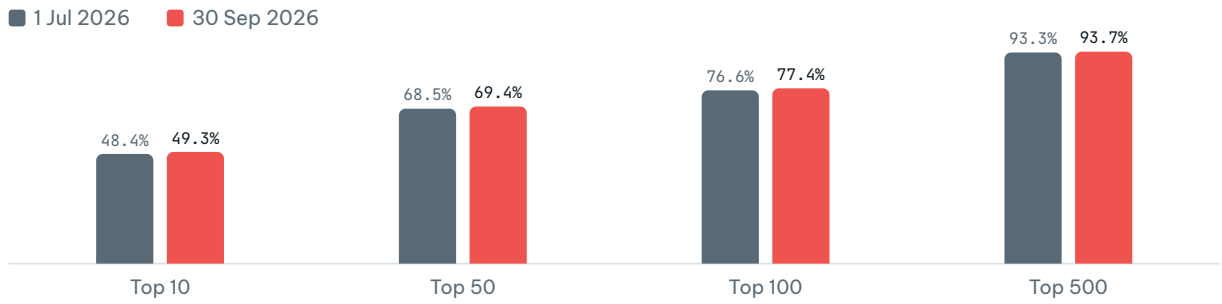

Most RBNT is still in wallets Redbelly reserved at launch (team, investors, ecosystem, reserve and others), and in contracts that release tokens over time. During the quarter, about 118 million RBNT flowed out of those two groups, and unnamed wallets ended up with 139 million more. The total went down slightly (1.45 million) because transaction fees on Redbelly are paid to a zero address and so leave circulation. Base fees in the quarter came to 2.00 million RBNT.

SECTION 2

How concentrated holdings are

This section looks only at **unnamed wallets holding more than 10 RBNT**: the community, exchanges' own wallets that are not labelled, and everyone else not in a named group. At the end of the quarter there were 14,552 of them, holding 1,921.9M RBNT between them.

CHART 2 **Share of unnamed-wallet RBNT held by the largest holders**

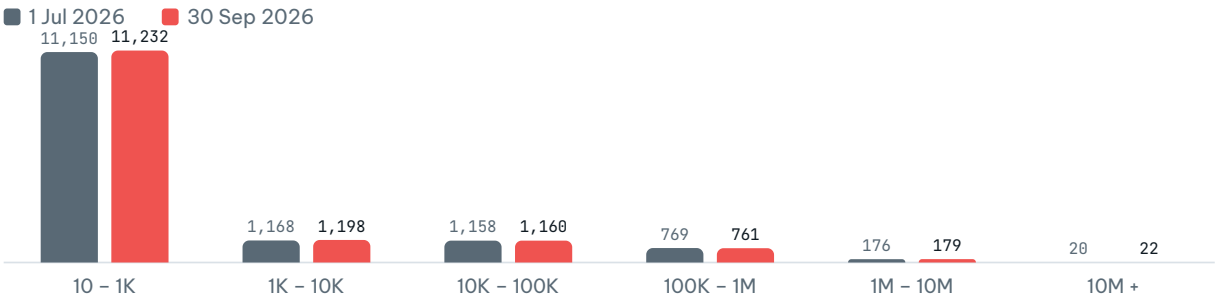

The 10 largest unnamed wallets held 49.3% of all unnamed-wallet RBNT on 30 September, and the 100 largest held 77.4%.

Source: Redbelly mainnet RPC, balances at blocks 3025809 (30 Jun 2026 23:57 UTC) and 3209414 (30 Sep 2026 23:57 UTC)

MEASURE	1 JUL 2026	30 SEP 2026	CHANGE
Holders (more than 10 RBNT)	14,441	14,552	+111
Top 10 share	48.4%	49.3%	+0.9 pts
Top 50 share	68.5%	69.4%	+0.9 pts
Top 100 share	76.6%	77.4%	+0.9 pts
Top 500 share	93.3%	93.7%	+0.4 pts
Gini coefficient (0 = equal, 1 = one wallet holds all)	0.984	0.984	+0.001
Median holding	64 RBNT	66 RBNT	

CHART 3 **Number of unnamed wallets by holding size (RBNT)**

Most wallets are small. Wallets holding 10 RBNT or less are not shown (see method).

Source: Redbelly mainnet RPC, balances at blocks 3025809 (30 Jun 2026 23:57 UTC) and 3209414 (30 Sep 2026 23:57 UTC)

IN PLAIN WORDS

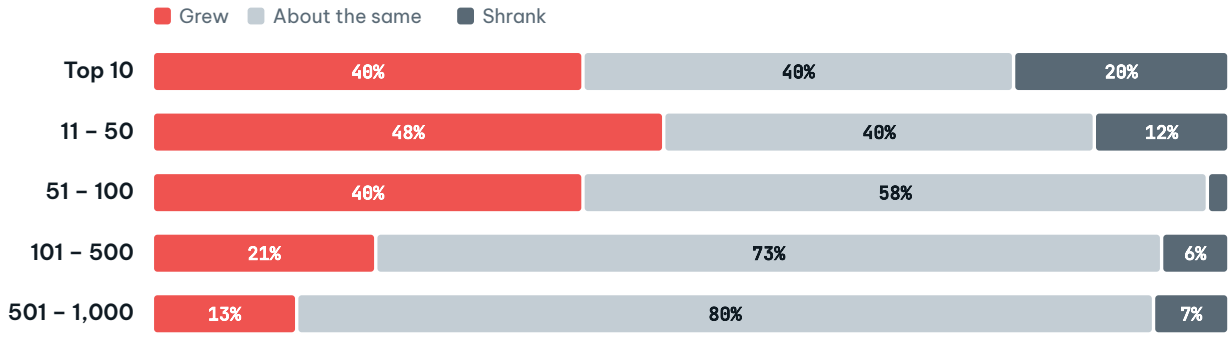

RBNT in unnamed wallets is held very unevenly: a few large wallets hold most of it, and thousands of wallets hold small amounts. The half-way wallet (the median) held about 66 RBNT. The Gini score of 0.98 is close to 1, which means very uneven. That is common for tokens where exchanges, funds and early participants keep large balances in single wallets. Over the quarter the picture barely changed. The number of wallets with 10 to 10,000 RBNT rose from 12,318 to 12,430.

SECTION 3

What the largest holders did

We ranked unnamed wallets by holdings on 1 July and kept those groups fixed, then looked at the same wallets on 30 September. Holdings include staked RBNT, so moving tokens into a staking pool does not count as selling.

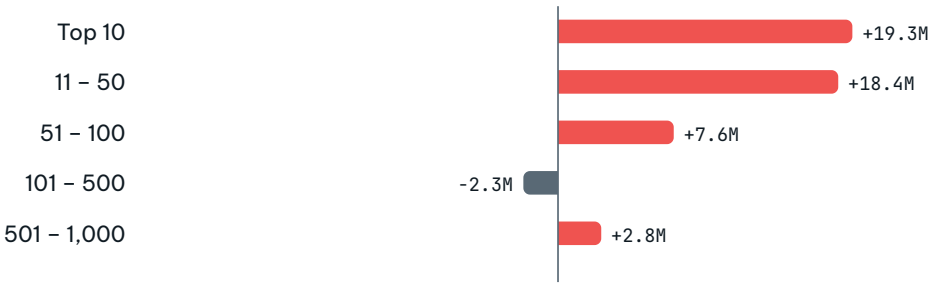

CHART 4 **How many wallets in each group grew, stayed about the same, or shrank**

In every group, more wallets grew than shrank. Most wallets ranked 101 to 1,000 kept roughly the same holdings.

Source: Redbelly mainnet RPC, balances at blocks 3025809 (30 Jun 2026 23:57 UTC) and 3209414 (30 Sep 2026 23:57 UTC). Grew or shrank = more than 1% change

CHART 5 **Net change in holdings for each group (RBNT)**

Change in total holdings of each group of wallets ranked on 1 July. Bars to the right are net increases.

Source: Redbelly mainnet RPC, balances at blocks 3025809 (30 Jun 2026 23:57 UTC) and 3209414 (30 Sep 2026 23:57 UTC)

GROUP (RANK ON 1 JUL)	WALLETS	1 JUL	30 SEP	CHANGE	GREW	SAME	SHRANK	EMPTIED
Top 10	10	863.6M	882.9M	+19.3M (+2.2%)	4	4	2	0
11 – 50	40	357.5M	375.8M	+18.4M (+5.1%)	19	16	5	1
51 – 100	50	144.2M	151.7M	+7.6M (+5.3%)	20	29	1	0
101 – 500	400	297.8M	295.6M	−2.3M (−0.8%)	83	292	25	5
501 – 1,000	500	77.5M	80.4M	+2.8M (+3.7%)	67	398	35	7

IN PLAIN WORDS

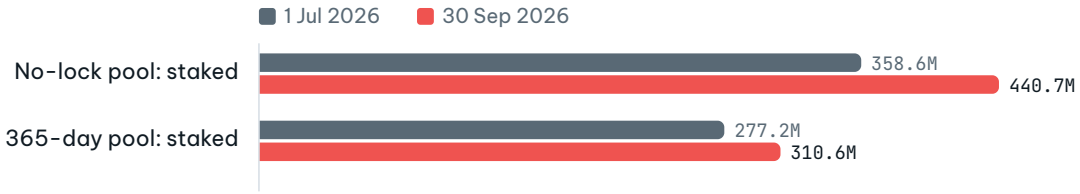

The 100 largest unnamed wallets on 1 July held 1,365.2 million RBNT, and by 30 September the same wallets held 1,410.4 million. Much of that is staked: 498.0 million at the start and 550.8 million at the end. 91 of the 100 were still in the top 100 at the end of the quarter, and 9 wallets joined it. Wallets that shrank were a minority in every group. Some wallets gaining is consistent with tokens arriving from vesting contracts and from the reserved wallets. The data cannot say why any wallet grew or shrank.

SECTION 4

Staking

RBNT is staked in two Reddex pools. Both pay rewards in RBNT, taken from the pool's own balance, so **a pool's RBNT balance includes reward funds as well as people's stakes**. The pool contracts keep a running total of stakes (`totalStake()`), which lets us separate the two.

CHART 6 **RBNT staked in each Reddex pool**

Stakes in the no-lock pool rose by 22.9%, and in the 365-day pool by 12.1%.

Source: Redbelly mainnet RPC, balances at blocks `3025809` (30 Jun 2026 23:57 UTC) and `3209414` (30 Sep 2026 23:57 UTC); pool function `totalStake()`

	NO-LOCK POOL	365-DAY POOL
Pool RBNT balance, 1 Jul	360.6M	278.5M
of which stakes	358.6M	277.2M
of which reward funds	1.99M	1.31M
Pool RBNT balance, 30 Sep	443.2M	311.5M
of which stakes	440.7M	310.6M
of which reward funds	2.55M	0.97M
Wallets with a stake, 1 Jul → 30 Sep	1156 → 1140	223 → 217
RBNT staked during the quarter (gross)	133.0M	63.4M
RBNT unstaked during the quarter (gross)	50.9M	30.0M
Stake / unstake / claim transactions	262 / 104 / 183	227 / 53 / 263
Reward funds added (all from Ecosystem (Unlocked))	5.0M	10.0M
Rewards paid out (estimate, see method)	4.44M	10.34M

IN PLAIN WORDS

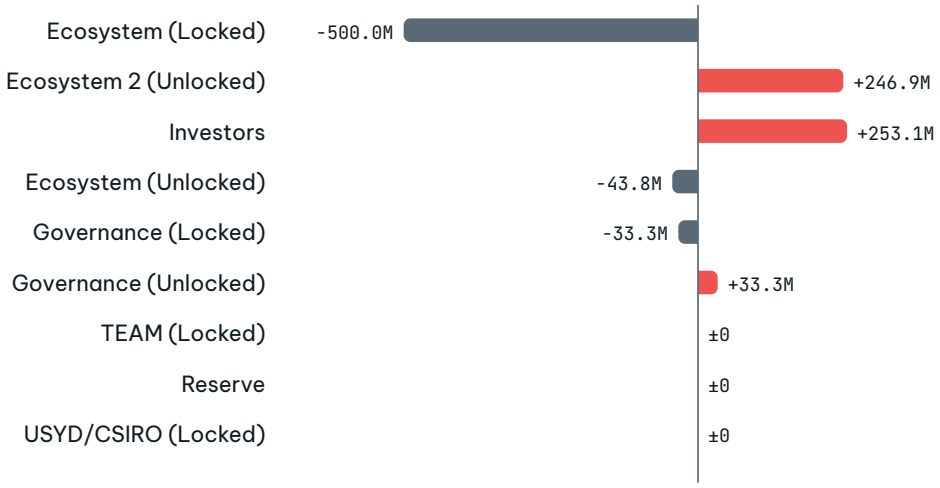

More RBNT went into staking than came out. Across both pools 196.4 million RBNT was staked during the quarter and 80.9 million was withdrawn. The 365-day pool opened on 31 May 2025, so deposits from its first months reached the end of their one-year lock in mid-2026. That is why some RBNT left it this quarter. Rewards are paid from RBNT added to the pools. Ecosystem (Unlocked) added 15 million RBNT in the quarter, and about 14.8 million was paid out to stakers. By 30 September, 7.6% of all RBNT was staked.

SECTION 5

Named wallets: reserved wallets, bridge and exchanges

Redbelly's nine reserved wallets are listed on the DAO treasury page. The table there shows their **original allocations**. The figures below are their actual balances on the chain at the two snapshots.

CHART 7 **Change in each reserved wallet's balance over the quarter (RBNT)**

Bars to the right are increases. Four wallets did not move at all.

Source: Redbelly mainnet RPC, balances at blocks 3025809 (30 Jun 2026 23:57 UTC) and 3209414 (30 Sep 2026 23:57 UTC); wallet names and addresses from redbellydao.network/treasury

RESERVED WALLET	ADDRESS	1 JUL 2026	30 SEP 2026	CHANGE
Ecosystem (Locked)	0xc5c131…879d	2,794.1M	2,294.1M	-500.0M
Ecosystem 2 (Unlocked)	0xe0c701…2df7	377.8M	624.7M	+246.9M
Investors	0xef816d…e566	0.0M	253.1M	+253.1M
Ecosystem (Unlocked)	0x415cad…3c9f	68.9M	25.1M	-43.8M
Governance (Locked)	0x9a8395…63d4	133.3M	100.0M	-33.3M
Governance (Unlocked)	0x9e6783…faea	66.7M	100.0M	+33.3M
TEAM (Locked)	0xbcee2d…77af	333.9M	333.9M	no change
Reserve	0x7473fe…c16d	2,000.0M	2,000.0M	no change
USYD/CSIRO (Locked)	0xac2738…6270	200.0M	200.0M	no change

What moved, and when

Six of the nine reserved wallets are multisig wallets that moved only on **10 September 2026**, in three transfers between reserved wallets within three minutes (blocks 3175499, 3175501 and 3175505):

- Ecosystem 2 (Unlocked) → Investors: 253,115,670 RBNT
- Ecosystem (Locked) → Ecosystem 2 (Unlocked): 500,000,000 RBNT
- Governance (Locked) → Governance (Unlocked): 33,333,333 RBNT

None of these RBNT left the reserved wallets during the quarter. TEAM (Locked), Reserve and USYD/CSIRO (Locked) did not change at all, and the Investors wallet did not send anything on before 30 September.

Ecosystem (Unlocked) is the one reserved wallet that sends its own transactions (118 in the quarter). Its holdings fell by 43,820,074 RBNT. Where the RBNT went:

- 25,100,000 RBNT wrapped into WRBNT, and 34,720,848 WRBNT then sent to 2 smart contracts
- 15,000,000 RBNT to the two Reddex pools as reward funds
- 3,496,669 RBNT to 13 unnamed wallets in 22 transactions
- 200,000 RBNT to other smart contracts
- 15,724 RBNT in transaction fees

It also received 9,613,167 WRBNT from a token vesting contract.

Bridge

The RBNT Native OFT Adapter is the contract that locks RBNT on Redbelly when it is bridged to another chain. It held 38.3 million RBNT on 1 July and 43.2 million on 30 September, a net increase of 4.9 million. So slightly more RBNT moved out to other chains than came back. RBNT on other chains is outside the scope of this report.

Exchanges

When the data was collected (26 October 2026), Routescan showed no public exchange labels for any Redbelly address. Exchange wallets therefore cannot be told apart from other wallets in this edition, and any exchange balances are inside the "unnamed wallets" group. If Routescan adds exchange labels, the next edition will report their flows separately.

IN PLAIN WORDS

This quarter, the big reserved-wallet moves were transfers between Redbelly's own wallets on one day. The RBNT that actually left the reserved wallets came from Ecosystem (Unlocked), which pays staking rewards and makes other ecosystem payments.

SECTION 6

How this report was made

Snapshots. Balances were read directly from the Redbelly chain at block `3025809` (the last block before 1 July 2026, 30 Jun 23:57:19 UTC) and block `3209414` (the last block of the quarter, 30 Sep 23:57:35 UTC). The treasury page lists original allocations, so it was used only for wallet names and addresses.

Which wallets. Every address that appeared in any transaction from the start of the chain up to 26 October 2026 was checked, along with the WRBNT holder list from Routescan. That is 738,504 addresses, of which 160,262 held RBNT at one of the two blocks.

Counting once. A wallet's holdings = its plain RBNT + its WRBNT + the RBNT it has staked in either Reddex pool. The RBNT inside the WRBNT contract is not counted again, because it is the backing of everyone's WRBNT. A pool's RBNT beyond its `totalStake()` is shown as reward funds. Pool balances therefore include reward funds as well as stakes.

Groups. Only publicly named wallets are named. Contracts are grouped by matching their code to verified contracts on Routescan (`TokenVestingManager`, `RBNTNativeOFTAdapter`). Every other wallet is reported only in groups. A holder is an unnamed wallet with more than 10 RBNT.

Checks. The appendix lists the reconciliation checks. WRBNT held = WRBNT supply = RBNT in the WRBNT contract, and the sum of stakers' balances = each pool's `totalStake()`. Both match to the wei at both blocks. The RBNT read at the start block is 99.63% of what should exist (10,000M allocated minus 30.1 million burned as fees since launch). Over the quarter, the total read fell by 1.45 million while 2.00 million was burned as fees. The 0.55 million difference is RBNT that moved in from addresses this method does not reach, such as contracts only ever called by other contracts. It is too small to change any finding.

The full method, scripts and data are in the repository (`METHOD.md`, `scripts/`, `data/`). Running the same scripts with new snapshot blocks produces the next edition.

APPENDIX

Where each figure comes from

Every figure is computed by the scripts in the repository from the files in `data/`. This table points each headline figure to its source.
